DoubleDutch App Integration

If you want to offer Glisser to your delegates from within your DoubleDutch application, you will need to integrate our Audience View. For example, let's say you have created a presentation and assigned the Glisser code *MyPres* to it. Delegates can access it via our regular interface using the URL *glsr.it/MyPres*, but even better if they can access it through your event app.

You can integrate Glisser in two ways:

- Add a link to redirect to our Audience View
- Use an iframe object to render our screen within your app

The format of the page you need to reference in your application is:

<https://attend.glisser.com/{inviteCode}/{emailParameter}>

Set up in the App

- Create your event on the [Glisser platform](#) and decide on the Glisser link (glsr.it/) – it's important not to change this.
- Log into your DoubleDutch CMS account at <https://doubledutch.me/doubledutch-login>
- Click *Discover More* in the menu bar and find *Glisser*.
- Click *Install Now* to enable Glisser on your DoubleDutch account.
- Glisser should now be installed. Click *Layout* on the menu bar and enable Glisser. You can also move it to with *Tab Navigation* so that it appears at the bottom of the app.
- Click *Content* in the menu bar and click on *Glisser* in the left-hand menu bar.
- Enter the Glisser link (glsr.it/) of your Glisser event that you created earlier to sync it to your DoubleDutch app.
